

AMENDMENTS TO THE CLAIMS:

Kindly amend claims 1, 9 and 11, as shown below.

This listing of claims will replace all prior versions and listings of claims in the Application:

Claim 1 (currently amended): An identification system comprising:

a plurality of transmitters, each said transmitter being configured to transmit only a single unique signal comprising a unique identification code corresponding only to said transmitter; and

a plurality of receivers, each said receiver being configured to receive only one said signal whereby to establish a comparison indication based on comparison of said unique identification code with a unique reference code;

wherein each said receiver is programmed to respond positively to said unique identification code that matches said receiver with only one said transmitter; and

wherein each said receiver comprises programmable memory for storing said unique reference code, capable of holding information regarding the location of said receiver, and each said receiver includes a user interface configured to program said memory.

Claim 2 (previously presented): The identification system of claim 1, wherein said comparison indication is positive if said unique identification code matches said unique reference code.

MANCHESTER, NH 03101
TEL. 603.668.1400
FAX. 603.668.8567

Claim 3 (previously presented): The identification system of claim 1, wherein said comparison indication is negative if said unique identification code does not match said unique reference code.

Claim 4 (canceled)

Claim 5 (previously presented): The identification system of claim 1, wherein each of said receivers further comprises a controller and an indicator, said controller being configured to communicate with said indicator, wherein said indicator provides said comparison indication based on comparison of said unique identification code with said unique reference code stored in said memory.

Claims 6-7 (canceled)

Claim 8 (previously presented): The identification system of claim 1, wherein at least one of said receivers is mounted to a fixed structure.

Claim 9 (currently amended): The identification system of claim ~~[[1]]~~ 8, wherein said fixed structure is a wall.

Claim 10 (previously presented): The identification system of claim 1, wherein said unique reference code is the same as said unique identification code.

Claim 11 (currently amended): An apparatus for identifying an infant-mother match from amongst several matches, comprising:

a plurality of transmitters, each said transmitter being configured to transmit only a single unique signal comprising a unique associated identification code for a specific infant;
and

a plurality of receivers, each said receiver being configured to receive only one said unique signal whereby to establish a comparison indication based on comparison of said unique identification code with a unique reference code;

wherein each said receiver is programmed to respond positively to said unique identification code that matches said receiver with only one said transmitter; and

wherein each said receiver comprises programmable memory for storing said unique reference code, capable of holding information regarding the location of said receiver, and each said receiver includes a user interface configured to program said memory.

Claim 12 (previously presented): The apparatus of claim 11, wherein at least one of said transmitters is coupled to an identification band, which identification band in turn is coupled to said associated infant.

Claim 13 (previously presented): The apparatus of claim 11, wherein said comparison indication is positive if said unique identification code for said associated infant matches said unique reference code for a mother of said infant.

Claim 14 (previously presented): The apparatus of claim 11, wherein said comparison indication is negative if said unique identification code for said associated infant does not match said unique reference code for a mother of said infant.

Claim 15 (canceled)

Claim 16 (previously presented): The apparatus of claim 11, wherein each of said receivers further comprises a controller and an indicator, said controller configured to communicate with said indicator, wherein said indicator provides said comparison indication

based on comparison of said identification code with said reference code stored in said memory.

Claim 17-18 (canceled)

Claim 19 (previously presented): The apparatus of claim 11, wherein at least one of said receivers is mounted to a fixed structure.

Claim 20 (original): The apparatus of claim 19, wherein said fixed structure is a wall.

Claim 21-25 (canceled)
